

Exercise 4 - Referencing

UGC ‘Advanced L^AT_EX’ Training Course

March 15th 2013

In this exercise, we will start to look at including bibliographies and referencing within our L^AT_EX documents

1. Add a `\thebibliography` environment to your document.
2. Add some references to your bibliography, and cite them within your text.
3. Compile your document and ensure the references and citations appear correctly.
4. Remove your `\thebibliography` environment and citations. Create an empty `.bib` file in the same directory as your current L^AT_EX file.
5. Add some BibT_EX entries to your bib file. You can make them up, or use real papers by finding the BibT_EX online or exporting it from your current reference manager.
6. Add some citations to your document using the `\cite` command.
7. Compile your document (following the steps in the lecture slides - remember to use BibT_EX as well as `pdflatex`) and verify your references and citations appear correctly.
8. Experiment with changing the bibliography style. Observe the differences between styles in terms of how the citations appear within the document and how the references are organised in the bibliography.
