## Theorem (The Poincaré inequality)

Suppose  $\Omega \in \mathbf{R}^n$  is a bounded domain with smooth boundary. Then there exists a  $\lambda > 0$ , depending only on  $\Omega$ , such that for any function f in the Sobolev space  $H^1_0(\Omega)$  we have:

$$\int_{\Omega} |\nabla u|^2 dx \ge \lambda \int_{\Omega} |u|^2 dx.$$

Here is what itemized and enumerated lists look like:

- itemized item 1
- itemized item 2
- itemized item 3

- enumerated item 1
- 2 enumerated item 2
- enumerated item 3
