Theorem (The Poincaré inequality)

Suppose $\Omega \in \mathbf{R}^n$ is a bounded domain with smooth boundary. Then there exists a $\lambda > 0$, depending only on Ω , such that for any function f in the Sobolev space $H^1_0(\Omega)$ we have:

$$\int_{\Omega} |\nabla u|^2 dx \ge \lambda \int_{\Omega} |u|^2 dx.$$

Here is what itemized and enumerated lists look like:

- itemized item 1
 - itemized item 2
 - itemized item 3

- enumerated item 1
- 2 enumerated item 2
- enumerated item 3
